What made you decide to study in the Czech republic?

it was quite random at the first glance, most of our students prefer to study in Hungary , I decided not to, because of the unreasonable high fees and the level of the university . I have this university and everything seemed to be exactly what i want from a school and city of course .

Did your studies meet your expectations?

I would say almost , there is still some room for improvement.

Were there any differences from studying in your country?

Well , it's not easy to even get accepted in a pharmacy school in Iran , you have to pass a general test that is held once per year for all the couple of thousands universities we have , and with millions of applicants , the chance of studying in your dream career is zero .

What was the biggest surprise with regard to studying or living in the Czech republic?

the best public transportation system which you can reach any corner of Brno with....Added bonus: you can lower the yearly/monthly price by half if you have an ISIC card!

Why would you recommend to study at Faculty of Pharmacy UVPS Brno and live in Brno?

The environment of our school is very calm and it represents a high level of teaching methods, knowledge ... so on . you will enjoy every second of it , even that the pharmacy is a very difficult field to study . the fee is also reasonable for this study and the university staff are very helpful if you need something .

As I also mentioned before , Brno has the best public transportation system i have ever seen, the prices everywhere are reasonable , the city is exceptionally safe , and ...of course the beer is good!

Is there something nobody has asked you yet and you want to say regarding your study abroad experience?

I would say it's a challenge , sometimes sweet and sometimes difficult .
